All Dual Hood Stripe Styles keep the same Width Gap up the center

Front Edge Trimming

At the cowl of the decal close to your windshield you will notice the decal stops at the line where the top flat edge ends. The hood spears top corner lines up at the tri-angle where the hood bends meet. **You received 2 side accent hood spears.** One is wider than the other. You can decide which width style to apply. We felt it best to simply send both spear width shapes in this package because we noticed both styles offer a cool look on this model Dakota truck hood.

Fade Space Measurements

The center fade part of this decal set arrives in 2 main parts. This way all the install person needs to do is center the stripe and align it along the edges. The front piece close at grill over-laps the front grill body joint seem and the hood. You trim off the over-lap material and tuck down into seem.

The rear fade part is shipped with the space alignment done you just need to line it up and apply it. You also have the option to separate the pieces to suit your preferred positioning or look.
